

FIRE ADAPTED NM SPRING WEBINAR OPPORTUNITIES!

Join us as we celebrate National Wildfire Preparedness Day

Wednesday, 4 May 2022, 6:00pm MDT

Community-based Wildfire Risk Reduction

Are you curious about how to reduce the risk of property destruction and the importance of community-level preparedness in reducing risk-spillovers?

Come hear Chris Barth and James Meldrum from the Wildfire Research (WiRē) Team speak about their recent publication on parcel-level risk. This webinar will focus on the paired rapid assessment-household survey approach to community hazard analysis that the WiRē team has employed with partners and communities across the West. Log on to learn more about reducing home hazard risk at the community level!

Wednesday, 18 May 2022, 6:00pm MDT

Pre-planning for fire operations and response: PODs

How do land managers plan for wildfire risk in their forest treatments? How do fire managers know how to respond when a wildfire is actively burning?

Please join us for a conversation on the powerful mapping and pre-planning tool called Potential Operational Delineations, or PODs. Kit O'Connor and Tyler Beeton will explain how PODs incorporates a risk management approach, local knowledge of the land, and existing barriers to fire to develop logical landscape-scale wildfire response options - before fires spark. Register now to learn about how this tool is being used to plan for forest treatments and wildfire response!

Register to attend the webinars via Zoom or tune in on the FACNM Facebook Live page
